Vision 2 Live Production Studio

Vision 2 Live Production Studio - 9 Rack Units of Pure Production Power.

Vision 2 Live Production Studio is a complete production package which combines a powerful Vision production switcher, robust SoftMetal video server, and trendsetting XPression graphics system into a fully integrated, uncompromising live production suite.

At the center of the system is the elegant Vision 2 control panel with full mnemonics, and a 2 MLE QMD chassis loaded with: 16 Multi-Def Inputs, 16 Multi-Def Outputs, and 4 Channels of 3D DVE including pre-processor effects, key-combiner with intersecting planes, backside video, timelines and 3D borders.

All this plus room to expand... Add more I/O and perhaps our new internal MultiViewers. Dual MultiViewer heads and 24 or 48 inputs - *No Problem!*

Also included is a SoftMetal Video Server with 1 input channel and 2 output channels for simultaneous playback and program recording. The SoftMetal server is tightly integrated with the Vision switcher for

precise and instant control of clip playback during live event productions. This server includes 16 channels of digital audio for every video channel and can playback embedded audio and discreet digital audio channels at the same time.

Fluid production graphics from XPression Studio AE SCE round out the system. Compelling 3D motion graphics, logos on multiple layers and beautiful titles are all at your fingertips through full integration with the Vision switcher. XPression Studio AE SCE is a complete hardware / software system with video and alpha outputs as well as a separate input for including external sources within your designs. **That's... Studio power!**
