

XPression

Real-Time Motion Graphics

XPression NLE Plug-In Live. Edited. Seamless.

The XPression NLE Plug-in brings the world of live graphics into the non-linear editing suite. Editors working on news stories or pre-packaged video segments can access the same templates used in the live-to-air control room. Replace text and images, and then apply the graphics directly to the timeline.

Maintaining a consistent graphic look between live and edited content is a breeze with the XPression NLE Plug-in. Say goodbye to Targa sequences and “sneaker-net” with thumb drives. XPression graphics from the NLE plug-in render in near real-time and transfer seamlessly to the NLE timeline.

The old “title tools” in non-linear editors just won’t cut it in today’s fast-paced, dynamic graphics environment. XPression’s NLE Plug-in gives editors a CG with the horsepower of a live graphics system at just a fraction of the price.

See your local Ross representative today for a list of supported systems.
